

CHRISTIAN OGUNLEYE T.

Software Engineer · Backend & Full Stack

Lagos, Nigeria · +234 814-628-9722 · ogunleyetimilehin15@gmail.com · github.com/djtimog · linkedin.com/in/djtimog · djtimog-portfolio.vercel.app

PROFILE

My journey into software engineering started with a Mathematics degree from Lagos State University, where I developed a strong instinct for problem-solving and analytical thinking. Over the past year, I have channeled that foundation into full-stack development, specializing in building responsive, performant front-ends with React and Next.js, alongside robust Node.js backends. I am drawn to high-scale financial systems where analytical engineering intersects with clean user experiences, and I am actively seeking a Junior, Intern, or NYSC engineering role to contribute to a production-scale team.

EXPERIENCE

Backend Engineering Trainee · Spraditech 2026 – Present

- Building server-side applications and RESTful APIs using Python and Node.js.
- Designing and querying relational (PostgreSQL/MySQL) and non-relational (MongoDB) databases.
- Studying software architecture, system design principles, and gaining exposure to Java for enterprise environments.

Frontend Development Trainee · Tech Master Institute 2024 – 2025

- Built responsive, performant UIs using React and Tailwind CSS for multiple client-facing projects
- Integrated REST APIs into frontend applications, handling async data flows and error states
- Collaborated in a team using Git and GitHub for version control and code review workflows

Administrative Assistant (SIWES) · Local Government Council – Budget Dept. 2024 (6 months)

- Maintained financial records and assisted in preparation of budget reports and data documentation

PROJECTS

GitHub Repository Browser | React Native, Expo SDK 54, GraphQL, Apollo Client v3, React 19

- Built a cross-platform mobile app (iOS + Web) to browse GitHub repositories using the GitHub GraphQL API
- Implemented Apollo Client v3 with useQuery hooks for efficient data fetching and caching on a React Native/Expo stack
- Resolved complex Windows/Metro bundler compatibility issues including ESM URL scheme errors and nvm-windows path conflicts
- Integrated react-router-native navigation with Formik + Yup form validation for authentication flows

TaskFlow – Full Stack Task Management App | React, TypeScript, Redux Toolkit, Node.js, Express, MongoDB, Docker

- Built a full-stack project and task management app with user authentication, project creation, task tracking, and a responsive dashboard with dark mode support
- Implemented JWT-based authentication, RESTful API design with Express, and MongoDB/Mongoose for data persistence

- Containerised the application with Docker and set up CI/CD pipelines via GitHub Actions
- Deployed to production on Render, serving the React frontend as static files from the Express backend

EDUCATION

Bachelor of Science, Mathematics · Lagos State University (LASU), Ojo 2021 – 2025

Full Stack Open · Full Stack Development · University of Helsinki (Online) 2025 – Present

TECHNICAL SKILLS

Languages	JavaScript (TypeScript), Python, Java (learning)
Backend	Node.js, Express, GraphQL, REST APIs, PostgreSQL, MongoDB, MySQL
Frontend	React, Next.js, React Native, Expo, Tailwind CSS, HTML/CSS, Redux Toolkit, React Query, React Hook Form, Zod, shadcn/ui
DevOps & Tools	Git, GitHub, Apollo Client, Postman, Vercel, Firebase, Vitest, Docker, GitHub Actions
Concepts	Data structures & algorithms, system design, software development lifecycle
Testing	Playwright, Vitest, React Testing Library, Jest
